cabeludo.dev

Full stack developer with 3+ years shipping APIs, financial integrations and AI agents to production for credit and collections fintechs — from the service that talks to the bank to the interface where customers settle their debts.

Experience

Full Stack Developer · Salt Systems

Sep 2023 — present

- Build Node.js/Express APIs and microservices that connect collection platforms to banks, payment providers and legacy SOAP services: debt lookup, settlement simulation, boleto and Pix issuing.
- Build AI agents on the Claude API with custom MCP servers that orchestrate collection, support and management routines, with context persisted in MongoDB.
- Develop multi-tenant white-label self-service portals in React: per-client theme and content resolved from the domain, i18n, server-side rendering and a PWA with push notifications.
- Implement JWT auth and multichannel OTP, plus caching and queues with Redis.
- Package services with Docker and deploy to VPS (EasyPanel) and AWS, with Playwright E2E and unit tests before every release.
- Led the migration of the Tino panel (an AI work management SaaS) to React: LiveKit calls, real-time voice and presence, and SSR public pages.

Stack

Front-end	React, TypeScript, Vite, styled-components, Tailwind CSS, Framer Motion, react-i18next, PWA/Web Push
Back-end	Node.js, Express, REST APIs, SOAP, JWT, OTP, WebSocket/SSE, LiveKit/WebRTC
AI	Claude API, MCP (Model Context Protocol), agents and orchestration
Data	MongoDB, Redis
Infra	Docker, AWS, EasyPanel/VPS, Git
Quality	Playwright (E2E), Vitest, Testing Library, ESLint, Prettier
Design	Figma

Projects

Tino — AI work management SaaS — tino.systems

Salt Systems website — Redesign of the company's corporate website.

CEACC — Sport shooting confederation portal built with Astro, light/dark theme.

Languages

Portuguese — native

English — fluent

Education

B.Sc. Software Engineering — UniCesumar, final semester

Courses

Node.js — DevClub

Alura — JavaScript, Node.js and React

JavaScript — Curso em Vídeo
